TRANSFORMATION COACHING

Gut Health: Complete Healing Blueprint

By **FIXYOURBODY**

This guide brings together evidence-informed principles of gut health, digestion, and lifestyle medicine — adapted specifically for Indian bodies, Indian food, and real-life routines.

It is designed to give you a framework you can personalise, not a one-size-fits-all diet. Your gut is unique to you. Use this blueprint as your starting point, then listen to what your own body tells you.

A note before you begin: This ebook is for educational purposes and general gut health improvement. It is not a substitute for professional medical advice, diagnosis, or treatment. If you are experiencing severe or persistent gut symptoms, or have a diagnosed condition such as IBS, Crohn's, ulcerative colitis, or SIBO, please consult a qualified gastroenterologist or physician before making significant changes to your diet, supplements, or lifestyle.

Understanding Your Gut

Why Gut Health Is Everything

Your gut is far more than a digestion system. It is often called the second brain — and for good reason. Around 70 to 80 percent of your immune system lives in your gut. Over 90 percent of your serotonin, the feel-good hormone, is produced there. Your gut communicates directly with your brain through the vagus nerve, influencing your mood, energy, focus and even your sleep quality.

When your gut is unhealthy, nothing else in your body works optimally. Your skin breaks out, your energy crashes, your mood swings, your immunity weakens and your hormones go out of balance. Healing your gut is not just about fixing bloating or indigestion. It is about healing your entire system.

What Is the Gut Microbiome?

Your gut microbiome is a vast ecosystem of trillions of bacteria, fungi, viruses and other microorganisms living inside your digestive tract. A healthy gut has enormous diversity — hundreds of different bacterial species working together to digest food, produce vitamins, regulate immunity and protect you from disease.

Here is the most important thing nobody tells you: your microbiome is completely unique to you. No two people have the same gut. Which is exactly why there is no single diet or protocol that works for everyone. The goal is to find what makes YOUR gut thrive.

Trillions of microorganisms inside the digestive tract make up your unique gut microbiome

Common Signs Your Gut Needs Healing

- Frequent bloating, gas or abdominal discomfort
- Irregular bowel movements — constipation, diarrhoea or both
- Acid reflux or heartburn
- Unexplained fatigue and low energy
- Brain fog, poor focus or mood swings
- Frequent colds, infections or low immunity
- Food intolerances that seem to be getting worse
- Skin issues like acne, eczema or rosacea
- Anxiety, depression or poor sleep quality
- Strong sugar or carbohydrate cravings

If you are experiencing severe or persistent gut symptoms, please consult a gastroenterologist. This blueprint is for educational purposes and general gut health improvement.

The Most Important Principle — Bio-Individuality

Every fitness influencer is telling you: eat more fibre, take probiotics, go plant-based, cut out dairy. And while some of that may be true for some people, none of it is universally true. This is the piece nobody is being honest about.

There is no one thing. There is only YOUR thing.

Some people thrive on a fully plant-based diet — their digestion improves, energy goes up, inflammation goes down. Put someone else on that exact same diet and they feel bloated, fatigued and depleted within weeks. Some people do perfectly well with dairy. Others break out in acne the moment whey protein enters their system. Same food. Completely opposite reactions. Neither person is wrong. Their guts are just different.

How to Find YOUR Gut's Language

- Pay attention to how you feel after every meal — energy, digestion, mood
 - Keep a simple food journal for 2 weeks. Note what you ate and how you felt 30 to 60 minutes later
 - Identify your personal trigger foods — the ones that consistently cause bloating, heaviness or brain fog
 - Elimination approach: remove one suspected food for 3 to 4 weeks and observe. Reintroduce and observe again
 - Common triggers to test: dairy, gluten, raw vegetables, legumes, eggs, onion and garlic
-

Your gut is constantly giving you feedback. Most of us are just too distracted to listen. Start listening.

What Is Actually Damaging Your Gut

The Real Gut Destroyers

Root Cause	What It Does to Your Gut	How Common
Chronic Stress	Damages the gut lining, reduces beneficial bacteria and impairs digestion	Extremely common
Antibiotics and Medications	Wipe out both harmful and beneficial bacteria, disrupting microbiome balance	Very common
Ultra-Processed Foods	Feed harmful bacteria, reduce microbial diversity	Extremely common
Excess Sugar and Refined Carbs	Feed harmful yeast and bacteria, promote inflammation	Extremely common
Poor Sleep	Disrupts the gut circadian rhythm, impairs repair	Very common
Alcohol	Damages the gut lining, disrupts microbiome balance	Common
Sedentary Lifestyle	Slows gut motility, reduces microbial diversity	Very common
Eating Too Fast	Bypasses proper chewing and enzyme activation, impairing digestion	Extremely common
Chronic NSAID Use	Damages the gut lining and increases intestinal permeability	Common
Chlorinated Tap Water	Chlorine can kill beneficial gut bacteria	Underappreciated

Lifestyle Changes for Gut Healing

Manage Stress — This Is Non-Negotiable

The gut-brain connection is real and bidirectional. Stress triggers the release of cortisol which directly impairs digestion, reduces gut motility and damages the intestinal lining. You cannot out-supplement a stressed nervous system.

- **Diaphragmatic Breathing:** Inhale slowly through the nose for 4 counts letting your belly expand, hold for 2, exhale through the mouth for 6. Do this for 5 to 10 minutes before meals to activate the parasympathetic nervous system and optimise digestion.
- **4-7-8 Breathing:** Inhale for 4, hold for 7, exhale for 8. Powerful for calming the gut-brain axis and reducing cortisol before bed.
- **Daily walks:** Even 15 to 20 minutes of walking after meals dramatically improves gut motility and reduces bloating.
- **Journaling:** 5 minutes of gratitude journaling at night reduces cortisol and improves gut microbiome diversity over time.
- **Digital detox before bed:** Screens stimulate cortisol and adrenaline, directly disrupting gut repair which happens during sleep.

Sleep — When Your Gut Repairs Itself

Your gut lining repairs itself primarily between 10pm and 2am. Missing this window consistently means chronic gut damage accumulates faster than it heals. Aim for 7 to 8 hours every night.

- **Sleep and wake at the same time daily** — your gut bacteria have their own circadian rhythm
- **Avoid eating within 2 to 3 hours of bed** — digestion competes with repair
- **Keep your room dark and cool** — this supports melatonin which also protects the gut lining

Eat Slowly and Mindfully

Digestion begins in the mouth. Chewing thoroughly activates salivary enzymes, signals the stomach to prepare acid and the pancreas to prepare digestive enzymes. Most gut issues can be significantly improved simply by slowing down.

- **Chew each bite 20 to 30 times** — this sounds excessive until you try it and notice the difference
- **Eat without screens.** Distracted eating activates the sympathetic nervous system and shuts down digestion
- **Do not drink large amounts of water with meals** — it dilutes digestive enzymes. Sip if needed
- **Sit down to eat.** Never eat standing, walking or rushing

Mindful eating habits that support better digestion

Diet for Gut Healing

Rather than following a trendy diet, follow these principles and then personalise based on how your specific gut responds.

Foods That Heal the Gut

Food Category	Examples (Indian Focus)	Key Benefit
Fermented Foods	Homemade dahi (curd), lassi, kanji, idli/dosa batter, pickles (fermented, not vinegar-based)	Introduce live beneficial bacteria
Prebiotic Foods	Garlic, onion, leek, banana (slightly green), oats, jowar, bajra	Feed and grow beneficial bacteria
Fibre-Rich Vegetables	Spinach, methi, broccoli, capsicum, carrots, beetroot	Bulk and diversity for the microbiome
Anti-Inflammatory Spices	Turmeric, ginger, jeera, ajwain, hing	Reduce gut inflammation and support digestion
Gut-Lining Healers	Bone broth, ghee, coconut oil, aloe vera juice	Repair intestinal permeability and soothe the lining
Polyphenol-Rich Foods	Amla, pomegranate, berries, green tea, dark chocolate	Diverse microbiome, reduce inflammation
Protein Sources	Eggs, chicken, fish, dal, paneer, tofu, sprouts	Gut lining repair requires amino acids

Foods That Harm the Gut

Foods to Reduce	Why It Harms the Gut
Refined flour (maida) and white bread	Feeds harmful bacteria, spikes blood sugar, promotes inflammation
Added sugars and sugary drinks	Feeds pathogenic yeast (Candida) and harmful bacteria, disrupts microbiome balance
Ultra-processed snacks and packaged food	Contain emulsifiers and preservatives that damage the gut lining
Refined vegetable oils (sunflower, soybean)	High in omega-6, promotes gut inflammation when consumed in excess
Alcohol	Directly toxic to gut lining, kills beneficial bacteria
Artificial sweeteners (aspartame, sucralose)	Disrupt microbiome composition even in small amounts — research is clear on this

Gut-Healing Drinks (Indian Recipes)

Drink	Recipe	When to Have	Key Benefit
Jeera + Ajwain Water	1 tsp cumin + 1/2 tsp ajwain boiled in water, strained	After meals	Reduces bloating and gas, improves digestion
Ginger + Lemon Warm Water	1 inch fresh ginger grated, squeezed into warm water with lemon	First thing in the morning	Stimulates gastric acid and digestive fire
Turmeric + Black Pepper Milk	1/2 tsp turmeric + pinch of black pepper in warm milk	Before bed	Heals gut lining, reduces intestinal inflammation
Amla + Aloe Vera Shot	2 tsp amla juice + 1 tbsp pure aloe vera juice	Morning on empty stomach	Rich in Vitamin C, soothes gut lining
Kanji (Fermented Drink)	Black carrots or beetroot fermented in mustard and water	With lunch	Natural probiotic, introduces live bacteria
Saunf (Fennel) Tea	1 tsp fennel seeds steeped in hot water	After meals	Relieves bloating, cramping and gas
Buttermilk (Chaas)	Thin curd blended with water, jeera and a pinch of salt	With or after lunch	Probiotic-rich, aids digestion and cooling
Kokum Sharbat	Dried kokum soaked in water, blended and strained	Afternoon	Digestive tonic, anti-inflammatory

Sample Gut-Healing Diet Plans

These are starting templates. The most important step is personalising based on how YOUR gut responds. Remove anything that consistently causes you discomfort and keep what makes you feel great.

Vegetarian Gut-Healing Plan

Meal	What to Eat
Early Morning (6:30–7am)	Warm ginger + lemon water OR amla + aloe vera shot. 5 soaked almonds + 2 walnuts
Breakfast (8–9am)	Moong dal chilla (2) with mint chutney + small bowl homemade curd OR vegetable poha with curry leaves and peanuts
Mid Morning (11am)	1 seasonal fruit OR handful of roasted makhana OR coconut water
Lunch (1–2pm)	1 cup dal (masoor or moong) + 1–2 roti (multigrain or bajra) + 1 cup sabzi + 1 cup salad with lemon + 1 small bowl curd
Evening (4–5pm)	Saunf tea OR jeera water + small bowl sprouted moong chaat OR 50g paneer with chaat masala
Dinner (7–8pm)	Khichdi (moong dal + rice + ghee) with steamed vegetables OR vegetable soup + 1 roti + sabzi. Keep dinner light.
Post Dinner	Short 10–15 min walk. Fennel tea or warm water with ajwain

Non-Vegetarian Gut-Healing Plan

Meal	What to Eat
Early Morning (6:30–7am)	Warm ginger + lemon water OR bone broth (if available). 5 soaked almonds
Breakfast (8–9am)	2–3 whole eggs (boiled or scrambled with vegetables) + 1 slice multigrain toast OR egg bhurji with vegetables
Mid Morning (11am)	1 fruit OR coconut water OR a small bowl of curd
Lunch (1–2pm)	150g grilled or curry chicken/fish + 1 cup dal or rajma + 1–2 roti or small bowl brown rice + salad
Evening (4–5pm)	2 boiled eggs OR a small bowl of chicken soup OR roasted chana + nuts
Dinner (7–8pm)	150g light fish (rohu, surmai) or chicken + steamed/sauteed vegetables + 1 roti. Avoid heavy or fried dinners.
Post Dinner	Short 10–15 min walk. Ginger tea or fennel tea

The Gut Repair Protocol — 4R Framework

If you have significant gut issues — IBS, chronic bloating, acidity, leaky gut — follow this structured 4R approach. It is one of the most evidence-backed frameworks for gut healing.

Step	What It Means	How to Do It	Timeline
Remove	Eliminate what is damaging the gut	Cut out ultra-processed foods, added sugar, alcohol and identified trigger foods	Weeks 1–4
Replace	Restore what the gut needs to digest properly	Add digestive bitters (like ginger, ajwain), digestive enzymes if needed, and adequate stomach acid support	Weeks 1–4
Reinoculate	Reintroduce beneficial bacteria	Add fermented foods daily (dahi, kanji, buttermilk) and a quality probiotic	Weeks 2–6
Repair	Heal and seal the gut lining	Bone broth or collagen, L-glutamine, zinc carnosine, omega-3s and stress reduction	Weeks 3–8+

The 4R protocol works best under the guidance of a functional medicine doctor or gastroenterologist. Do not attempt aggressive gut protocols alone if you have diagnosed conditions like Crohn’s, ulcerative colitis or SIBO.

Best Supplements for Gut Health

All supplements should be taken under the guidance of a registered physician or gastroenterologist. Always get baseline tests done before starting a supplement protocol.

Recommended Tests Before Starting

- Complete Blood Count (CBC) and CRP (inflammation marker)
- Vitamin D3 and Vitamin B12 levels
- Thyroid panel (TSH, T3, T4) — gut and thyroid are deeply connected
- Fasting blood glucose and insulin
- Stool test for gut microbiome analysis (if available and recommended by doctor)
- H. pylori test if you have chronic acidity or stomach pain

Supplement	Key Gut Benefit	General Dosage	Notes
Probiotics (Multi-strain)	Restores beneficial bacteria, reduces IBS symptoms, improves microbiome diversity	10–50 billion CFU daily with food	Look for strains like <i>Lactobacillus acidophilus</i> , <i>L. rhamnosus</i> , <i>Bifidobacterium longum</i> . Refrigerated brands are often more potent.
L-Glutamine	Repairs intestinal lining, heals leaky gut, reduces intestinal permeability	5g daily on empty stomach	The most important amino acid for gut lining repair. Especially useful after antibiotic use.
Digestive Enzymes	Improves breakdown of food, reduces bloating and gas after meals	1–2 capsules before main meals	Useful if you feel heavy or bloated after protein or high-fat meals.
Magnesium Glycinate	Relieves constipation, relaxes gut muscles, reduces stress-driven gut issues	300–400mg before bed	Most gentle form of magnesium for the gut. Oxide form causes diarrhoea — avoid it.
Zinc Carnosine	Heals and protects the gut lining, reduces ulcer risk	75mg daily	Specifically studied for gut lining repair. More targeted than regular zinc.
Triphala	Gentle bowel regulator, prebiotic, antioxidant, improves gut motility	500mg before bed or as per Ayurvedic guidance	Traditional Ayurvedic formulation of amla, bibhitaki and haritaki. Safe for long-term use.
Omega-3 Fatty Acids	Reduces gut inflammation, supports the gut-brain axis	1–2g EPA+DHA daily with food	Choose high-quality fish oil or algae-based omega-3 for vegetarians.
Vitamin D3 + K2	Low Vitamin D is strongly linked to IBD, leaky gut and poor immunity	Based on blood report — typically 2000–5000 IU daily	Take with a fat-containing meal for best absorption.
Psyllium Husk (Isabgol)	Soluble fibre that feeds beneficial bacteria and regulates bowel movements	1 tsp in water before bed	Start with small doses and increase slowly. Always take with plenty of water.
Apple Cider Vinegar	Stimulates gastric acid, improves digestion, may reduce acid reflux from low stomach acid	1 tsp in warm water 15 min before meals	Do NOT use if you have ulcers, gastritis or esophageal issues without medical advice.

Gut Conditions — What You Need to Know

Condition	What It Is	Key Natural Approaches
Bloating and Gas	Excess gas production from incomplete digestion or bacterial fermentation	Eat slower, identify trigger foods (often onion, garlic, beans, dairy), try digestive spices, short walks after meals
Acid Reflux / GERD	Stomach acid moving into the oesophagus, often from low stomach acid not high	Avoid lying down after meals, reduce trigger foods (spicy, fried, coffee, alcohol), try ACV before meals (only if no ulcers), sleep with head elevated
IBS (Irritable Bowel Syndrome)	Functional gut disorder with alternating constipation and diarrhoea, pain and bloating	Low-FODMAP diet trial, stress management is critical, probiotics, identify personal triggers, regular meal timing
Constipation	Infrequent or difficult bowel movements	Increase fibre gradually, hydration (at least 2.5–3L water daily), movement after meals, magnesium glycinate, triphala, reduce refined foods
Leaky Gut	Increased intestinal permeability allowing particles into the bloodstream causing systemic inflammation	Remove inflammatory foods, add L-glutamine, bone broth, ghee, zinc carnosine, probiotics and stress reduction
Small Intestinal Bacterial Overgrowth (SIBO)	Bacterial overgrowth in the small intestine causing severe bloating, gas and malabsorption	Requires proper diagnosis (breath test). Low-FODMAP diet, work with a gastroenterologist. Probiotics can sometimes worsen SIBO.

A Message to Everyone Reading This

Your gut has been trying to talk to you for a long time.

The bloating after every meal. The energy crash at 3pm. The brain fog that makes it hard to think clearly. The skin that keeps breaking out no matter what you put on it. The anxiety that seems to have no reason. These are not random. These are messages.

We live in a world that has normalised feeling terrible. We have been told that bloating is normal, that low energy is just life, that skin issues are genetic and that gut problems just have to be managed with medications. And most of us believed it, because nobody gave us a better answer.

But here is the truth: your body is not designed to feel this way. It is designed to digest effortlessly, to wake up with energy, to think clearly, to feel calm, to absorb nutrients and to thrive. The fact that it is not doing those things is not a life sentence. It is information.

Healing the gut is not about finding the perfect diet or the magic supplement. It is about paying attention — to what you eat, how you eat, how you sleep, how you handle stress, and most importantly, to the signals your own body is sending you every single day.

Start small. Add one fermented food. Go for a walk after dinner. Eat one meal slowly and without your phone. Drink one gut-healing drink each morning. These are not small things. Every single one of them is a message back to your gut that says: I am listening. I am showing up for you.

*Healing is not linear. But it is always possible.
Your gut wants to heal. Give it the conditions to do so.*

Take Your Transformation Further

This blueprint gives you the knowledge. But sustainable transformation happens when you have structure, accountability and a plan that is built specifically for your body and your goals.

FIXYOURBODY — Transformation Plans for Men & Women.

Built for Indian bodies, Indian food and real-life schedules. No fads. No shortcuts. Just a plan that actually works.

What You Get Inside FIXYOURBODY

- Structured workout plans for all fitness levels — beginner to advanced
- Diet plans built around Indian foods and high-protein principles
- Dedicated Women's Transformation Plans with hormonal health guidance
- Progress tracking to keep you consistent and motivated
- Step-by-step guidance so you always know exactly what to do next

How to Get Started
